

Author's Tone And Attitude

A. Introduction to Tone and Attitude

When an author writes an academic passage, they do not just present raw data; they also inject a specific "voice" or emotion into the text.

1. **Author's Attitude:** The author's feelings or stance toward the subject matter (e.g., approving, disapproving, indifferent).
2. **Author's Tone:** The emotional coloring or dress of the writing. It reflects the writer's attitude (e.g., critical, optimistic, cynical, objective).

To spot the tone, you must look closely at the word choices (diction), especially the adjectives and adverbs used in the text.

B. Common Tone Vocabulary in UTBK

The options for tone questions are always in English. You must familiarize yourself with these key terms:

- **Objective / Neutral:** The author presents pure facts, data, and balanced perspectives without taking sides or showing emotion.
- **Critical:** The author actively points out flaws, mistakes, or negative aspects of a system, policy, or trend.
- **Optimistic:** The author expresses hope, confidence, and positive outlooks about the future of a certain issue.
- **Skeptis / Doubtful:** The author expresses lack of belief or hesitation regarding the success or truth of something.
- **Concerned / Worried:** The author shows deep anxiety or distress about a dangerous problem (usually related to environment, health, or social issues).

C. Worked-Out Example & Detailed Review

Read the following passage carefully:

The implementation of artificial intelligence (AI) in public healthcare systems has been heralded as a revolutionary milestone. Optimists argue that diagnostic algorithms can detect life-threatening anomalies on X-rays with unprecedented speed and accuracy, potentially saving thousands of lives. However, a closer inspection reveals that this rapid deployment is deeply flawed.

Most AI diagnostic models are trained primarily on data from affluent demographics, making them notoriously inaccurate when analyzing scans from minority or low-income populations. Instead of bridging the healthcare gap, these unregulated technologies risk reinforcing systemic biases and perpetuating medical discrimination. Until comprehensive regulatory frameworks and diverse data auditing are strictly enforced, rushing AI into clinical settings is an incredibly reckless gamble with human lives.

Question 1: What is the author's attitude toward the rapid implementation of AI in public healthcare?

- A. Enthusiastic and supportive of its future prospects.
- B. Completely indifferent to the technological transition.
- C. Highly critical due to its potential risks and systemic biases.
- D. Sceptical about the scientific accuracy of the diagnostic algorithms.
- E. Apologetic on behalf of the tech companies developing the software.

- Answer Explanation: Let's dissect the author's diction in the second paragraph: "*deeply flawed*", "*notoriously inaccurate*", "*risk reinforcing systemic biases*", and "*incredibly reckless gamble*". These words are loaded with strong disapproval and sharp evaluation. The author is not just doubtful (skeptical); they are actively exposing the dangerous flaws of the current trend. Therefore, the author's attitude is undeniably critical. Correct Answer: C

D. Independent Practice Task

Passage for Practice: The global community's response to the escalating climate crisis remains disappointingly sluggish. Despite decades of overwhelming empirical evidence pointing toward cataclysmic environmental shifts, major industrial nations continue to prioritize short-term economic gains over aggressive carbon-emission cuts. International climate pacts are frequently signed with grand fanfare, only to be hollowed out by loops, delays, and a lack of binding enforcement mechanisms. We are rapidly approaching an ecological tipping point, yet our collective leadership chooses to meet existential peril with nothing but superficial gestures and empty rhetoric.

Question: Which of the following best describes the tone of the author in the passage? A. Informative B. Cynical C. Empathetic D. Indifferent E. Complacent

(Analyze the text, find the emotional keywords, and pick your best answer!)
